

Last Minute Changes

Although both the manual and Installer script mention a Multi-Sequence Compositor for the FRED program, the Compositor that will be installed is only a Dual-Sequence Compositor. This installed version has a small cosmetic (text layout) problem, but that will not restrict you in any productive way from using this program. An Alpha_Compositor has been included as well that has a similar cosmetic problem, but is very much functional. These problems will be addressed in a future release.

Listed below are the descriptions that are not fully legible.
